Research Interests

I'm broadly interested in building agents that can continually learn from experience, adapt, and improve over their lifetimes. To this end, I have actively worked on online reinforcement learning, imitation learning, and reward design for sequential decision-making problems, with applications in robotics.

Ocado Technology (Formerly Kindred AI), Machine Learning Researcher, Toronto, Canada 2017 - 2020
- Devised deep reinforcement learning techniques for SORT, a piece-picking robot that grasps, scans and stows items in warehouses for clothing stores like GAP and American Eagle.
- Developed SenseAct, an open-source computational framework for reliable, reproducible learning on physical robots.
